

SESSIONS @ MICHIGAN

Application Summary

Sessions @ Michigan is a custom web application built by Technology Solutions in Student Life. It was created in the Fall of 2015 for the *First Year Experience* initiative and rapidly adopted by all Student Life units and the wider University community to manage registration and attendance for their on-campus events. **Core features include:**

- **The ability to collect customized information through a custom formbuilder, waitlisting and communication features for your event's registrants and robust sharing features to publicize your event.**
- **Sessions also offers several ways to track attendance for your event including: scanning Mcards and self check-in kiosks.**
- **Your data is made available through direct downloads, integration with Google Drive and Salesforce.**

Development is ongoing and Sessions continues to evolve with new features and enhancements.

If you are interested in bringing Sessions @ Michigan to your department or school, please contact Student Life Technology Solutions. Training sessions are regularly offered to give an overview of the features and capabilities of the system.
