Application Summary

Sessions @ Michigan is a custom web application built by Technology Solutions in Student Life. It was created in the Fall of 2015 for the First Year Experience initiative and rapidly adopted by all Student Life units and the wider University community to manage registration and attendance for their on-campus events. Core features include:

- Zoom video conferencing integration and Social Login for seamless virtual Sessions scheduling, including attendees without a UM Uniqname.

- Collect customized information through a custom formbuilder, waitlisting and communication features for your event's registrants and robust sharing features to publicize your event.

- Attendance tracking, including: Virtual self check-in, scanning Mcards. Your data is made available through direct downloads, integration with Google Drive and Salesforce.

Development is ongoing and Sessions continues to evolve with new features and enhancements.

If you are interested in bringing Sessions @ Michigan to your department or school, please contact Student Life Technology Solutions. Training sessions are regularly offered to give an overview of the features and capabilities of the system.

114,000+ Annual Registrations
